[PORTFOLIO](#)

## PROJECTS

[LIVE](#) - [GITHUB](#)

**Pick a movie** — A solo web application that allows two or more users to pick and match their favorite movies.

- Successfully established a real-time connection using socket.io.
- Deployed and styled different aspects of the website.
- Utilized a user-friendly interface using multiple advanced tools and APIs such as Framer Motion and IMDb APIs.

[LIVE](#) - [GITHUB](#)

**Objectively Better Books** — An eCommerce group project selling books that offer different functionality for users and guests.

- Effectively Used express routes to communicate with the front end.
- Used JSON Web Tokens to store encrypted user information.
- Utilized React to build components to render them on a webpage and utilized Redux for state management.

[LIVE](#) - [GITHUB](#)

**Moments** — A PWA web app group project allows users to capture or upload a photo and match it with a song.

- Authenticated users and obtained authorization to access users' data using Spotify APIs.
- Effectively used the color-thief library to extract the dominant colors in photos.
- Met all PWA criteria, resulting in the ability to install the app without the need to host it in the app store.

## SKILLS

React - Redux - Node.js - Express  
- Sequelize - PostgreSQL - HTML5  
- CSS3 - Socket.io - framer motion  
- IMDB APIs - Spotify APIs - JWT  
- Webpack - git

## LANGUAGES

English, Arabic
